

# LALLEMAND PRODUCTS – ORGANIC CERTIFICATION INFORMATION

The following non-organic food ingredients have been approved by ACO as acceptable for use in certified organic food products. Refer to ACO website link: <http://aco.net.au/natural-food-ingredients-database/>

OMRI is an acronym for the 'Organic Materials Review Institute (USA)'. OMRI listed products may be used on operations that are certified organic under the USDA national Organic program. The link to the OMRI website is <http://www.omri.org>. Australian winemakers use this as supportive documentation to gain approvals to use the products from their Australian certification body.

This information does not replace the need to ensure the products are allowed for use by your certification body prior to use. For international market compliance please contact your certifying body.

Product Name	Product Name	Product Name
